

ABSTRACT

Reagents for use in preparing a therapeutic liposome composition sensitized to a target cell are
5 described. The reagents include a liposomal
composition composed of pre-formed liposomes having an
entrapped therapeutic agent and a plurality of
targeting conjugates composed of a lipid, a hydrophilic
polymer and a targeting ligand. The therapeutic,
10 target-cell sensitized liposome composition is formed
by incubating the liposomal composition with a selected
conjugate.
